# Project Design Phase-II
Data Flow Diagram & User Stories
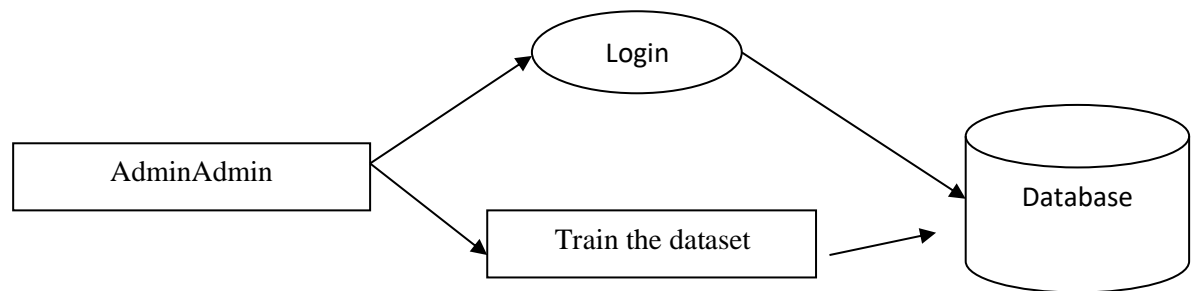

Data Flow Diagrams:

       The classic visual representation of how information moves through a system is a data flow diagram (DFD). A tidy and understandable DFD can graphically represent the appropriate quantity of the system demand. It can be done manually, automatically, or both.It demonstrates how information enters and exits the system, what modifies the data, and where information is kept.A DFD's goal is to outline the boundaries and scope of a system as a whole. It can be utilised as a communication tool between a system analyst and any participant in the sequence that serves as the foundation for system redesign.

       LEVEL-0

LEVEL-1

```
                          Login
AdminAdmin

              Train the dataset              Database
```

LEVEL 2

```
                  Enroll the user id

User              user_defined              Database
                  Parameter

                  Predict the resale car
                  value
```
